DronaHQ vs outsystems

A practical comparison for fast-moving teams

From visual builders to AI support, pricing to platform flexibility, see how the two platforms compare where it matters most.

Features	DronaHQ AI	OutSystems
AI Capabilities	NL/Vision App Gen, LLM Integrations, AI builders (Agent*, MCP Server*) *Coming Soon*	Agent workbench for building and orchestrating custom ai agents, plus context-aware recommendations
UI & Components	Intuitive drag and drop builder designed for engineering teams. 150 + ready controls including performant data grids and charts.	Drag and drop studio with enterprise controls. Steeper learning curve for non-OutSystem experts. Limited built-in widgets often requiring custom code or marketplace add-ons
Integrations	75 + native connectors for Databases, APIs and LLMs (OpenAI, vertex ai and custom models)	Reusable connectors for SAP, Salesforce, REST and SOAP APIs
Visual Action Flows	Point and click action flows builder, conditional branching, pre-built server-side, client-side tasks	Business Process Model and Notation (BPMN) modeler requiring specialised training and external consultants
Custom Code	Inline javascript editor and custom control designer, AI assist available	Server and client logic spanning IDEs and source repositories
Add Ons	PDF generator, scheduled automation jobs, public apps, embed, managed database and file storage connectors	Requires forge modules or partner solutions and each adds licensing and install steps
Support	24 × 5 live chat support, case-based support and priority Slack channels, weekly workshops and discord forum	Tiered phone and web support with SLA windows and slower response times
Deployment & environments	Switch between dev, test and prod with a single click (unlimited environments for Apps and Data source)	Separate lifecycles per environment, manual git and deployment pipelines
